The Obalon Navigation Console features Dynamic Visualization to monitor the balloon capsule throughout the placement procedure.

**Easy to use**
- Designed for intuitive balloon placement
- Dynamic tracking of the balloon’s path and location prior to inflation
- System notifications displayed on a digital touchscreen throughout the administration process

**Clinically proven safety**
- 100% accurate balloon location determination in the COBALT clinical study

**Portable and convenient**
- Has a small footprint and is mobile
- The system can be operated in a variety of practice settings

**Easy to incorporate into your practice**
- In-office training and Product Specialist support available
- The Navigation System uses low energy EMF and does not require state licensure or radiation exposure monitoring

The Obalon Balloon System is intended for adults with a body mass index (BMI) of 30 to 40 kg/m² willing to follow a diet and exercise program. All Obalon balloons must be removed in 6 months. Patients with prior weight loss surgeries are not eligible. The most common side effects reported were mild abdominal pain and nausea which typically resolved within two weeks. Patients must take daily acid-blocking medicine prescribed by their doctor. For full Important Safety Information, visit www.obalon.com click on Safety Information and Patient Labeling.
The Obalon Touch™ Dispenser

The Obalon Touch Dispenser features a semi-automated process to inflate the Obalon Balloons once in the stomach.

**Easy, one-touch balloon administration**
- Initiates balloon inflation process with a single start button

**Controlled inflation**
- Regulated pressurization designed to prohibit balloon inflation in the esophagus or other anatomically constrained space

**Digital display**
- Touchscreen displays system pressure and balloon information throughout the inflation process

**Lightweight balloons**
- Each balloon only weighs approximately 3 grams and has a volume of 250cc
